

REVOKED

Statement of Principles

concerning

**MULTIPLE MYELOMA**

**ICD CODE: 203.0**

Veterans' Entitlements Act 1986  
subsection 196B(2)

1. Being of the view that there is sound medical-scientific evidence that indicates that **multiple myeloma and death from multiple myeloma** can be related to operational service rendered by veterans, peacekeeping service rendered by members of Peacekeeping forces and hazardous service rendered by members of the Forces, the Repatriation Medical Authority determines, under subsection 196B(2) of the *Veterans' Entitlements Act 1986*, that the factors that must as a minimum exist before it can be said that a reasonable hypothesis has been raised connecting **multiple myeloma or death from multiple myeloma** with the circumstances of that service, are:
  - (a) being within 4 kilometres of the epicentre of the atomic explosions on the city of Hiroshima or Nagasaki within seven days of the explosion on that city; or
  - (b) being occupationally exposed to paints and/or lacquers before the clinical onset of multiple myeloma; or
  - (c) being exposed to herbicides in Vietnam before the clinical onset of multiple myeloma; or
  - (d) inability to obtain appropriate clinical management for multiple myeloma.

2. Subject to clause 3 (below) at least one of the factors set out in paragraphs **1(a) to (d)** must be related to any service rendered by a person.
3. The factor set out in paragraph **1(d)** applies only where:
  - (a) the person's **multiple myeloma** was contracted prior to a period, or part of a period, of service to which the factor is related; and
  - (b) the relationship suggested between the **multiple myeloma** and the particular service of a person is a relationship set out in paragraph 8(1)(e), 9(1)(e), 70(5)(d), or 70(5A)(d) of the Act.
4. For the purposes of this Statement of Principles:

**“being exposed to herbicides in Vietnam”** may be said to have occurred only if the person had:

- (a) rendered more than 30 days service on land in Vietnam; or
- (b) regularly eaten fish, fish products, crustaceans, shellfish, or meat from Vietnam; or
- (c) regularly eaten food cooked with water from Vietnam discoloured by sediment, or regularly drunk water from Vietnam discoloured by sediment; or
- (d) regularly inhaled dust in a defoliated area in Vietnam or regularly inhaled herbicide fog in Vietnam; or
- (e) sprayed or decanted herbicides in Vietnam as an occupational requirement;

**“ICD code”** means a number assigned to a particular kind of injury or disease in the tenth edition of the *International Classification of Diseases* 9th Revision, effective date of 1 October 1993, copyrighted by the US Commission on Professional and Hospital Activities, and having the Library of Congress number 77-94472;

**“multiple myeloma”** means a malignant neoplasm of plasma cells arising in the bone marrow, and characterised by diffuse involvement of the skeletal system, hyperglobulinemia, Bence-Jones proteinuria, and anaemia, attracting ICD code 203.0.
