

## Statement of Principles

concerning

# DENTAL MALOCLUSION

ICD CODES: 524.0 - 524.5, 524.7 - 524.9

Veterans' Entitlements Act 1986  
subsection 196B(3)

1. Being of the view that on the sound medical-scientific evidence available to the Repatriation Medical Authority, it is more probable than not that **dental malocclusion** and **death from dental malocclusion** can be related to eligible war service (other than operational service) rendered by veterans and defence service (other than hazardous service) rendered by members of the Forces, the Repatriation Medical Authority determines, under subsection 196B(3) of the *Veterans' Entitlements Act 1986* (the Act), that the factors that must exist before it can be said that, on the balance of probabilities, **dental malocclusion** or **death from dental malocclusion** is connected with the circumstances of that service, are:
  - (a) suffering craniofacial injuries before the clinical onset of dental malocclusion; or
  - (b) suffering a craniofacial disease process before the clinical onset of dental malocclusion; or
  - (c) suffering craniofacial injuries before the clinical worsening of dental malocclusion; or
  - (d) suffering a craniofacial disease process before the clinical worsening of dental malocclusion.

2. Subject to clause 3 (below) at least one of the factors set out in paragraphs **1(a) to 1(d)** must be related to any service rendered by a person.
3. The factors set out in paragraphs **1(c) to 1(d)** applies only where:
  - (a) the person's **dental malocclusion** was suffered before a period, or part of a period, of service to which the factor is related; and
  - (b) the relationship suggested between the **dental malocclusion** and the particular service of a person is a relationship set out in paragraph 8(1)(e), 9(1)(e) or 70(5)(d) of the Act.
4. For the purposes of this Statement of Principles:

**“craniofacial injuries”** means an injury resulting in fracture of the maxilla, mandible or tooth loss;

**“craniofacial disease”** means any disease process causing distortion of the maxilla or mandible, ie infiltration by primary or secondary malignancy, Paget's disease of bone or tuberculosis;

**“ICD code”** means a number assigned to a particular kind of injury or disease in the Australian Version of The International Classification of Diseases, 9th revision, Clinical Modification (ICD-9-CM), effective date of 1 July 1995, copyrighted by the National Coding Centre, Faculty of Health Sciences, University of Sydney, NSW, and having ISBN 0 642 22235 5;

**“dental malocclusion”** means such malposition and contact of the maxillary and mandibular teeth as to interfere with their optimal function to such extent that adaptive processes have not been sufficient to prevent occlusal trauma, attracting an ICD code in the range 524.0 to 524.5 or 524.7 to 524.9.

Dated this *Twenty-third* day of *November* 1995
