

REVOKED

Statement of Principles

concerning

OPEN-ANGLE GLAUCOMA

ICD CODE: 365.1

Veterans' Entitlements Act 1986
subsection 196B(3)

1. Being of the view that on the sound medical-scientific evidence available to the Repatriation Medical Authority, it is more probable than not that **open-angle glaucoma** and **death from open-angle glaucoma** can be related to eligible war service (other than operational service) rendered by veterans and defence service (other than hazardous service) rendered by members of the Forces, the Repatriation Medical Authority determines, under subsection 196B(3) of the *Veterans' Entitlements Act 1986* (the Act), that the factor that must exist before it can be said that, on the balance of probabilities, **open-angle glaucoma** or **death from open-angle glaucoma** is connected with the circumstances of that service, is:
 - (a) inability to obtain appropriate clinical management for the open-angle glaucoma.
2. Subject to clause 3 (below) the factor set out in paragraph **1(a)** must be related to any service rendered by a person.
3. The factor set out in paragraph **1(a)** applies only where:

- (a) the person's **open-angle glaucoma** developed before a period, or part of a period, of service to which the factor related; and
- (b) the relationship suggested between the **open-angle glaucoma** and the particular service of a person is a relationship set out in paragraph 8(1)(e), 9(1)(e) or 70(5)(d) of the Act.

4. For the purposes of this Statement of Principles:

“ICD code” means a number assigned to a particular kind of injury or disease in the tenth edition of the *International Classification of Diseases* 9th Revision, effective date of 1 October 1993, copyrighted by the US Commission on Professional and Hospital Activities, and having the Library of Congress number 77-94472;

“open-angle glaucoma” means one of a group of eye diseases characterised by an increase in intraocular pressure which causes pathological changes in the optic disk and typical defects in the field of vision, in which the angle of the anterior chamber remains open, but with relative obstruction to aqueous outflow, attracting ICD code 365.1.

Dated this **Twenty-first** day of **June**
1995
