Statement of Principles
concerning
DISLOCATION OF A JOINT AND
SUBLUXATION OF A JOINT
(Reasonable Hypothesis)
(No. 55 of 2019)

The Repatriation Medical Authority determines the following Statement of Principles under subsection 196B(2) of the Veterans' Entitlements Act 1986.

Dated 26 April 2019

The Common Seal of the Repatriation Medical Authority was affixed to this instrument at the direction of:

Professor Nicholas Saunders AO
Chairperson
Statement of Principles concerning Dislocation Of A Joint And Subluxation Of A Joint (Reasonable Hypothesis) (No. 55 of 2019) Veterans' Entitlements Act 1986

Schedule 1 - Dictionary ..............................................................................................................7

1 Definitions...................................................................................................................................7
1 Name
This is the Statement of Principles concerning dislocation of a joint and subluxation of a joint (Reasonable Hypothesis) (No. 55 of 2019).

2 Commencement
This instrument commences on 27 May 2019.

3 Authority
This instrument is made under subsection 196B(2) of the Veterans' Entitlements Act 1986.

4 Repeal
The Statement of Principles concerning dislocation No. 24 of 2010 (Federal Register of Legislation No. F2010L01040) made under subsection 196B(2) of the VEA is repealed.

5 Application
This instrument applies to a claim to which section 120A of the VEA or section 338 of the Military Rehabilitation and Compensation Act 2004 applies.

6 Definitions
The terms defined in the Schedule 1 - Dictionary have the meaning given when used in this instrument.

7 Kind of injury, disease or death to which this Statement of Principles relates
(1) This Statement of Principles is about dislocation of a joint and subluxation of a joint and death from dislocation of a joint and subluxation of a joint.

Meaning of dislocation of a joint and subluxation of a joint
(2) For the purposes of this Statement of Principles:

(a) dislocation of a joint means an episode of displacement of a joint such that there is complete loss of contact between the articulating surfaces of the bones or internal joint prosthesis; and

(b) subluxation of a joint means an episode of displacement of a joint such that there is partial loss of contact between the articulating surfaces of the bones or internal joint prosthesis; and

(c) dislocation of a joint and subluxation of a joint includes:

(i) joint dissociation; and
(ii) dislocation or subluxation at a synchondrosis, syndesmosis or an internal joint prosthesis; and

(d) dislocation of a joint and subluxation of a joint excludes spondylolisthesis, congenital dislocation or subluxation, recurrent dislocation or subluxation due to joint instability, and loosening or migration of an internal joint prosthesis.

Death from dislocation of a joint or subluxation of a joint

(3) For the purposes of this Statement of Principles, dislocation of a joint or subluxation of a joint, in relation to a person, includes death from a terminal event or condition that was contributed to by the person's dislocation of a joint or subluxation of a joint.

Note: terminal event is defined in the Schedule 1 – Dictionary.

8 Basis for determining the factors

The Repatriation Medical Authority is of the view that there is sound medical-scientific evidence that indicates that dislocation of a joint or subluxation of a joint and death from dislocation of a joint or subluxation of a joint can be related to relevant service rendered by veterans, members of Peacekeeping Forces, or members of the Forces under the VEA, or members under the MRCA.

Note: MRCA, relevant service and VEA are defined in the Schedule 1 – Dictionary.

9 Factors that must exist

At least one of the following factors must as a minimum exist before it can be said that a reasonable hypothesis has been raised connecting dislocation of a joint or subluxation of a joint or death from dislocation of a joint or subluxation of a joint with the circumstances of a person's relevant service:

(1) having physical trauma to the affected joint at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note: Examples of activities and circumstances involving trauma to the affected joint include, but are not limited to, falls, collisions, lifting weights, push ups, pull ups, throwing objects, seizure and electrical injury.

(2) having damage to a soft tissue structure as specified at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note: soft tissue structure as specified is defined in the Schedule 1 - Dictionary.

(3) having a fracture, avulsion or bony abnormality involving the articulating surfaces of the affected joint, at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note: Examples of conditions which can cause a bony abnormality include, but are not limited to, osteonecrosis, dysbaric osteonecrosis and femoroacetabular impingement.
(4) having a disease process as specified affecting the normal structural or functional relationship between the articulating surfaces of the affected joint at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note: *disease process as specified* is defined in the Schedule 1 – Dictionary.

(5) being pregnant within the six weeks before the clinical onset of dislocation of a joint or subluxation of a joint;

(6) for dislocation of a temporomandibular joint or subluxation of a temporomandibular joint only, undertaking an activity or undergoing a medical procedure that involves wide opening of the mouth at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note 1: Examples of activities which may involve wide mouth opening include, but are not limited to, yawning, laughing, vomiting, coughing, and chewing large pieces of food.

Note 2: Examples of medical procedures that involve wide mouth opening include, but are not limited to, dental procedures, direct laryngoscopy, and intravenous administration of medications which cause drug-induced yawning.

(7) for dislocation of a patellofemoral joint only, being obese at the time of the clinical onset of dislocation of a joint;

Note: *being obese* is defined in the Schedule 1 - Dictionary.

(8) for dislocation of a tibiofemoral joint or subluxation of a tibiofemoral joint only, being severely obese at the time of the clinical onset of dislocation of a joint or subluxation of a joint;

Note: *being severely obese* is defined in the Schedule 1 - Dictionary.

(9) for dislocation of a total hip joint prosthesis only:

(a) being obese at the time of the clinical onset of dislocation of a joint; or

Note: *being obese* is defined in the Schedule 1 - Dictionary.

(b) having lumbar spondylosis, lumbar intervertebral disc prolapse, lumbar spondylolisthesis, lumbar spinal stenosis or lumbar spinal fusion at the time of the clinical onset of dislocation of a joint;

(10) for dislocation of a total knee joint prosthesis only, having morbid obesity at the time of the clinical onset of dislocation of a joint;

(11) inability to obtain appropriate clinical management for dislocation of a joint or subluxation of a joint.

10 Relationship to service

(1) The existence in a person of any factor referred to in section 9, must be related to the relevant service rendered by the person.

(2) The factor set out in subsection 9(11) applies only to material contribution to, or aggravation of, dislocation of a joint or subluxation.
of a joint where the person's dislocation of a joint or subluxation of a joint was suffered or contracted before or during (but did not arise out of) the person's relevant service.

11 Factors referring to an injury or disease covered by another Statement of Principles

In this Statement of Principles:

(1) if a factor referred to in section 9 applies in relation to a person; and

(2) that factor refers to an injury or disease in respect of which a Statement of Principles has been determined under subsection 196B(2) of the VEA;

then the factors in that Statement of Principles apply in accordance with the terms of that Statement of Principles as in force from time to time.
Schedule 1 - Dictionary

1 Definitions

In this instrument:

**being obese** means having a Body Mass Index (BMI) of 30 or greater.

Note: *BMI* is also defined in the Schedule 1 - Dictionary.

**being severely obese** means having a Body Mass Index (BMI) of 35 or greater.

Note: *BMI* is also defined in the Schedule 1 - Dictionary.

**BMI** means $W/H^2$ where:

- $W$ is the person's weight in kilograms; and
- $H$ is the person's height in metres.

**disease process as specified** means:

- (a) a neurological, neuromuscular or muscular condition, including, but not limited to, brain or spinal injuries with spasticity or flaccid paralysis, cerebrovascular accident, Parkinson's disease, myasthenia gravis, poliomyelitis, dyskinesia caused by neuroleptic drugs, and peripheral neuropathy; or
- (b) an infective, inflammatory or degenerative condition of the affected joint, including, but not limited to, septic arthritis, rheumatoid arthritis, ankylosing spondylitis, psoriatic arthropathy, crystal arthropathy, Grisel syndrome and osteoarthritis; or
- (c) an intra-articular space occupying lesion, including, but not limited to, neoplastic lesions such as sarcoma, osteosarcoma, chondrosarcoma and pigmented villonodular synovitis.

Note: Grisel syndrome is atlantoaxial joint subluxation due to contiguous inflammation from the ear, nose or throat.

**dislocation of a joint and subluxation of a joint**—see subsection 7(2).

**MRCA** means the *Military Rehabilitation and Compensation Act 2004*.

**relevant service** means:

- (a) operational service under the VEA;
- (b) peacekeeping service under the VEA;
- (c) hazardous service under the VEA;
- (d) British nuclear test defence service under the VEA;
- (e) warlike service under the MRCA; or
- (f) non-warlike service under the MRCA.

Note: *MRCA* and *VEA* are also defined in the Schedule 1 - Dictionary.

**soft tissue structure as specified** means a joint capsule, tendon, ligament or fibrocartilaginous structure that contributes to joint stability in the affected joint.
terminal event means the proximate or ultimate cause of death and includes the following:

(a) pneumonia;
(b) respiratory failure;
(c) cardiac arrest;
(d) circulatory failure; or
(e) cessation of brain function.

VEA means the Veterans’ Entitlements Act 1986.
